The problem

Difference in landings between 1970 & 2017	
	Cod: ↓ -97%
	Whiting: ↓ -88%
	Haddock: ↓ -59%
	Plaice: ↓ -95%
	Sole: ↓ -93%
	Herring: ↓ -81%
	Crabs: ↑ +780%
	Nephrops: ↑ +56%
	Scallops: ↑ +34%

The problem

Ecosystem model stakeholder workshop

Oct. 2017

The Solution?

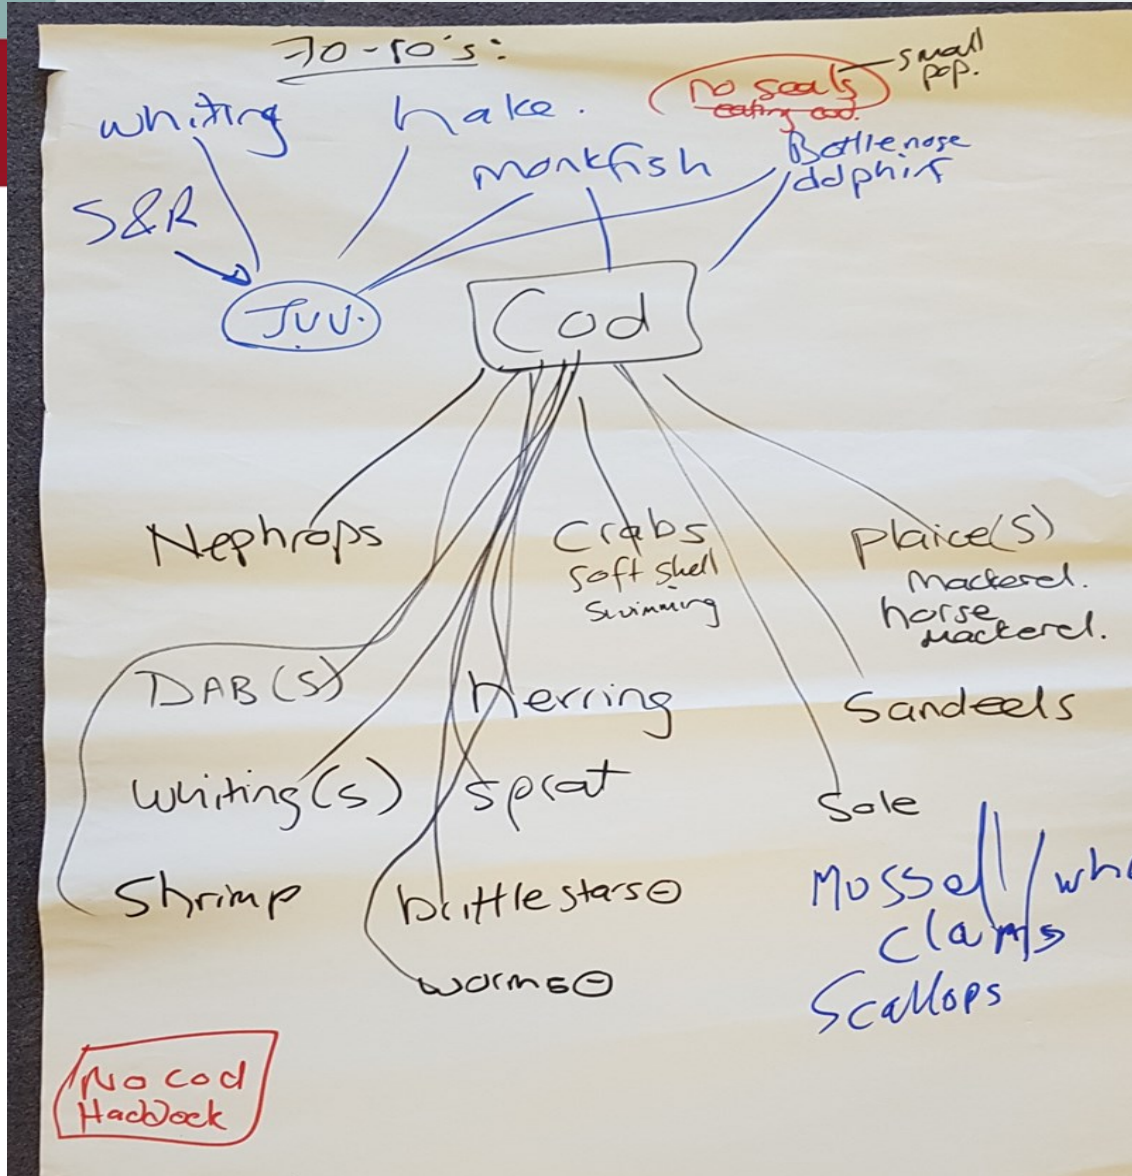

Ecosystem modelling Ecopath and Le Mans Framework

- **Base year 1975**
- **But no long term diet data**
- **Effort data back to 2003 only**

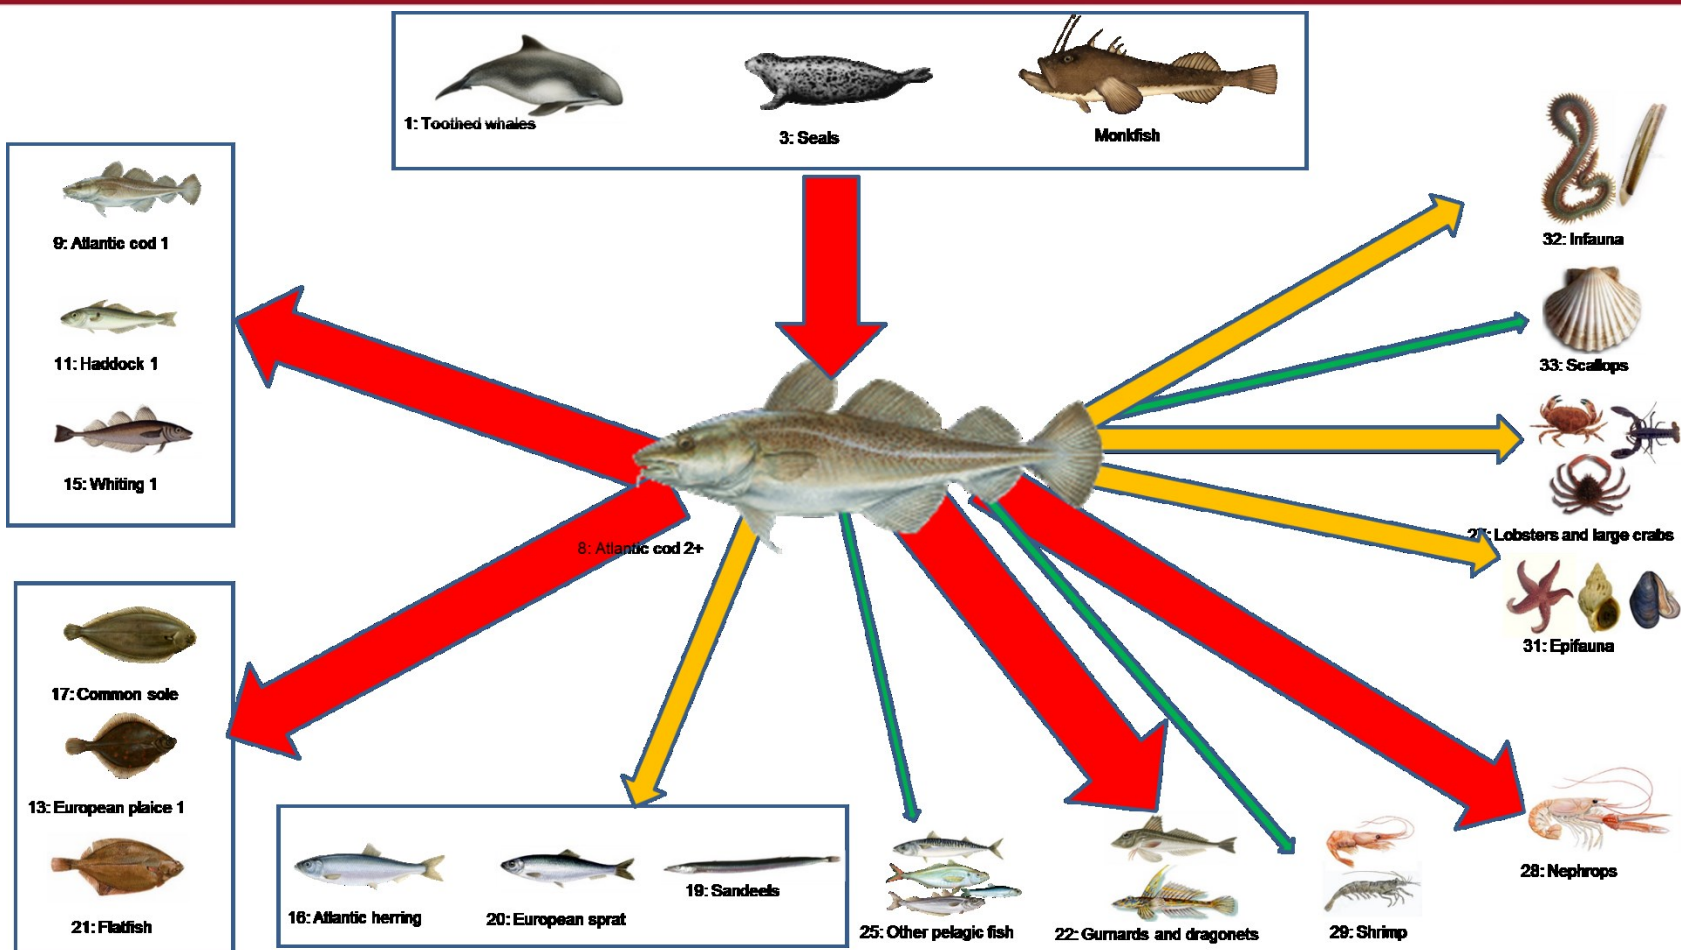

Building food webs from stakeholders heads!

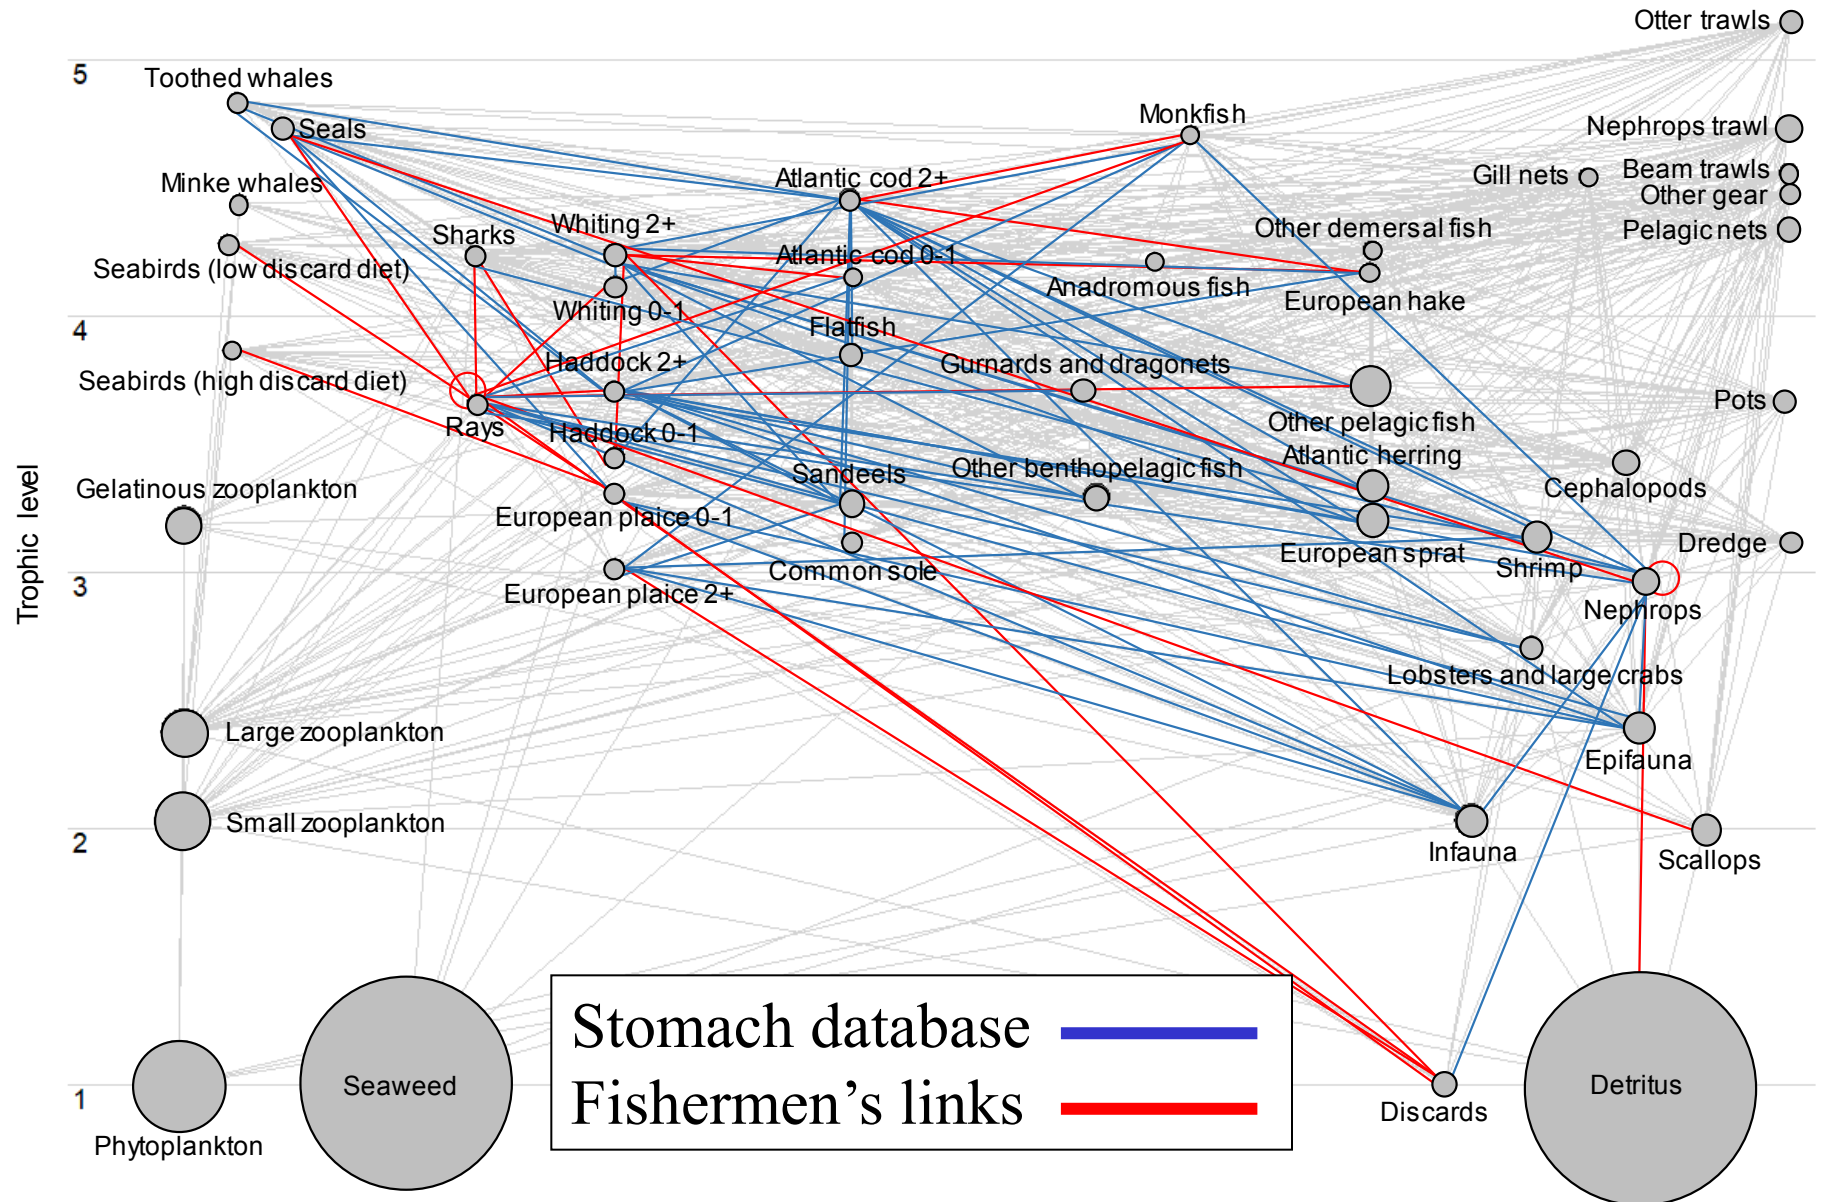

Building food webs from stakeholders heads!

Building food webs from stakeholders heads!

Building food webs from stakeholders heads!

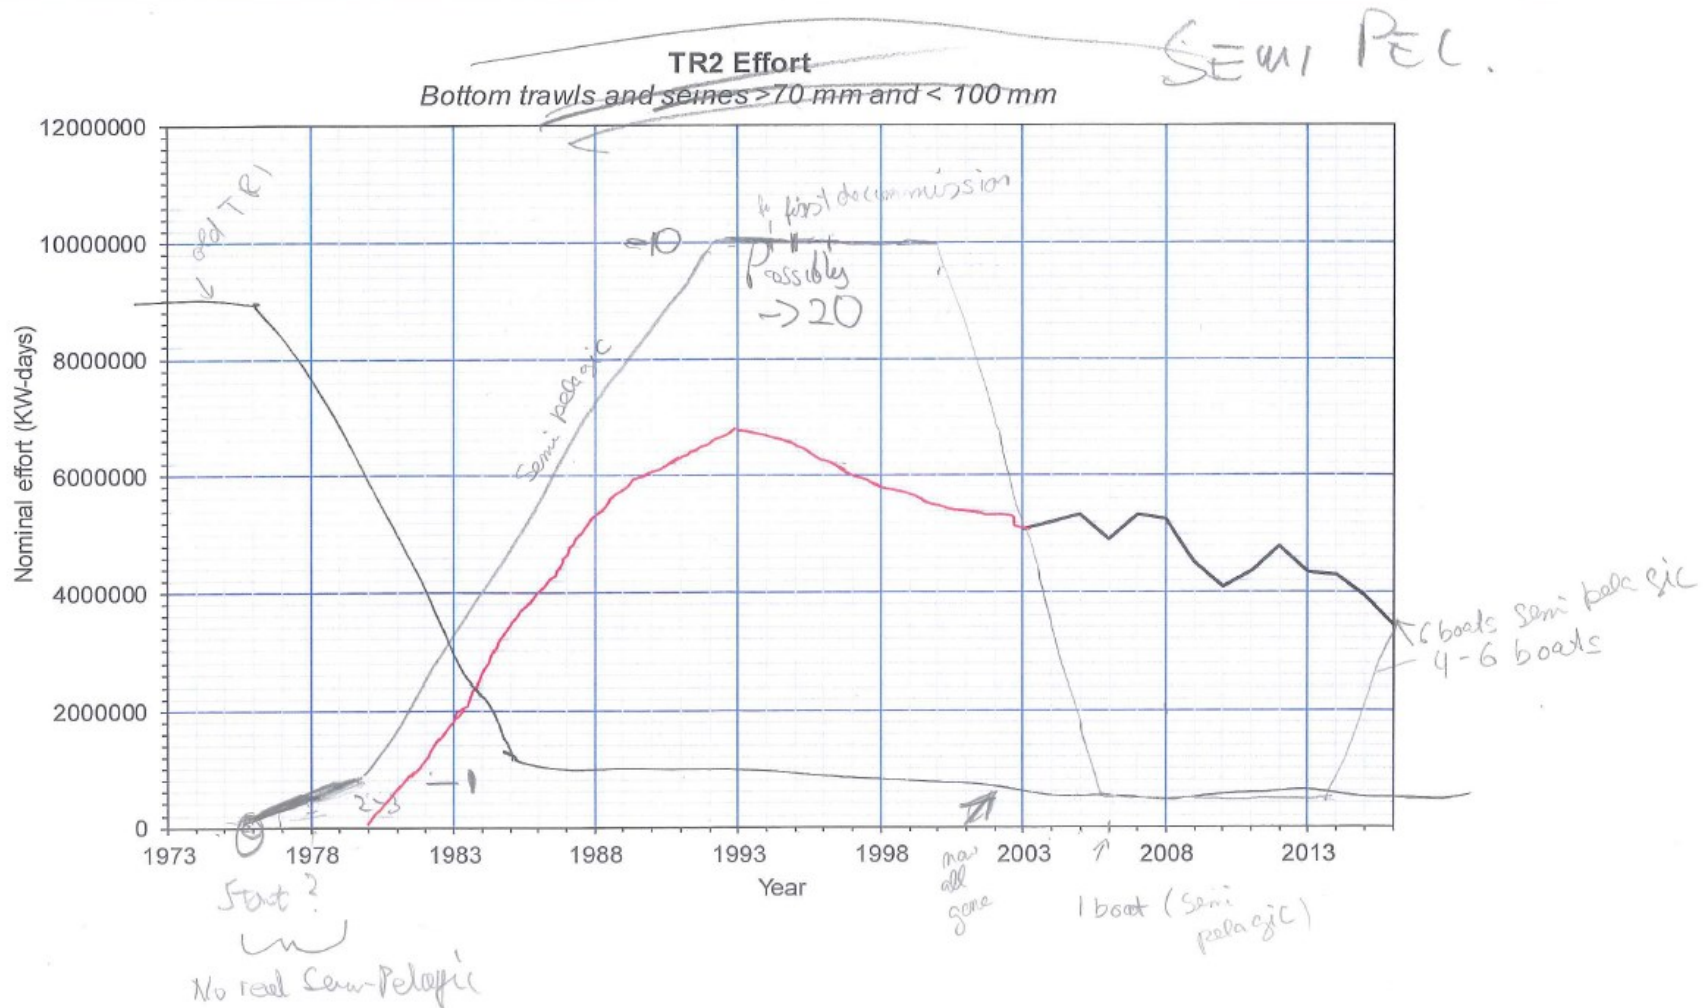

Reconstructing effort trajectories from stakeholders heads!

Reconstructing effort trajectories from stakeholders heads!

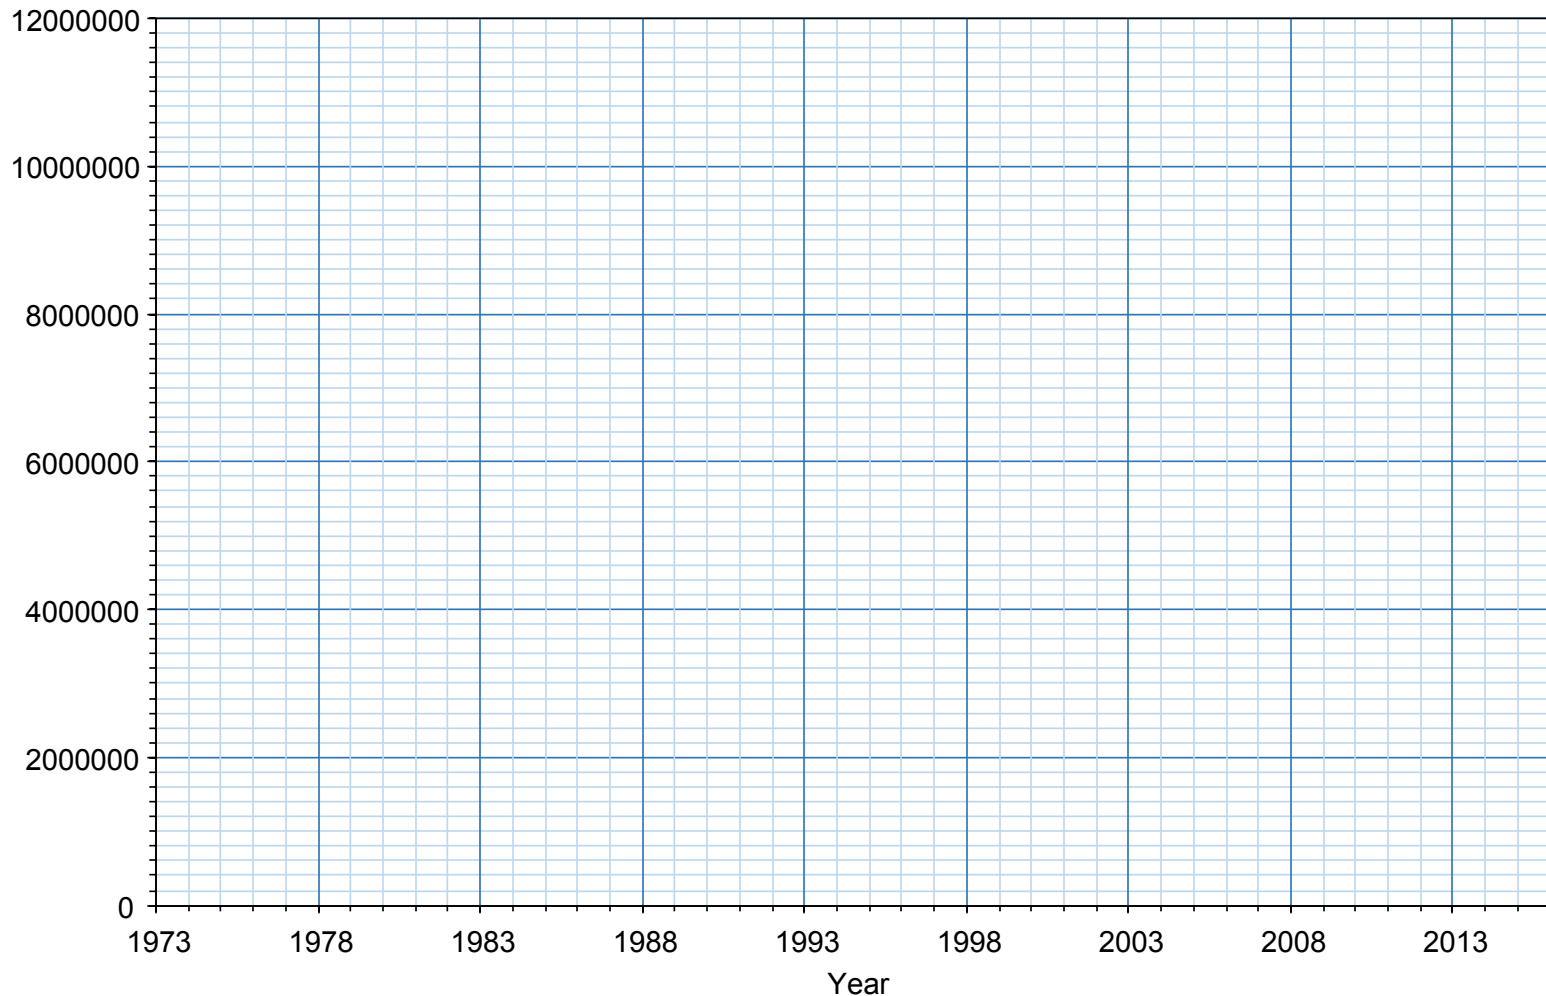

Ecopath: What did effort look like back in the day?

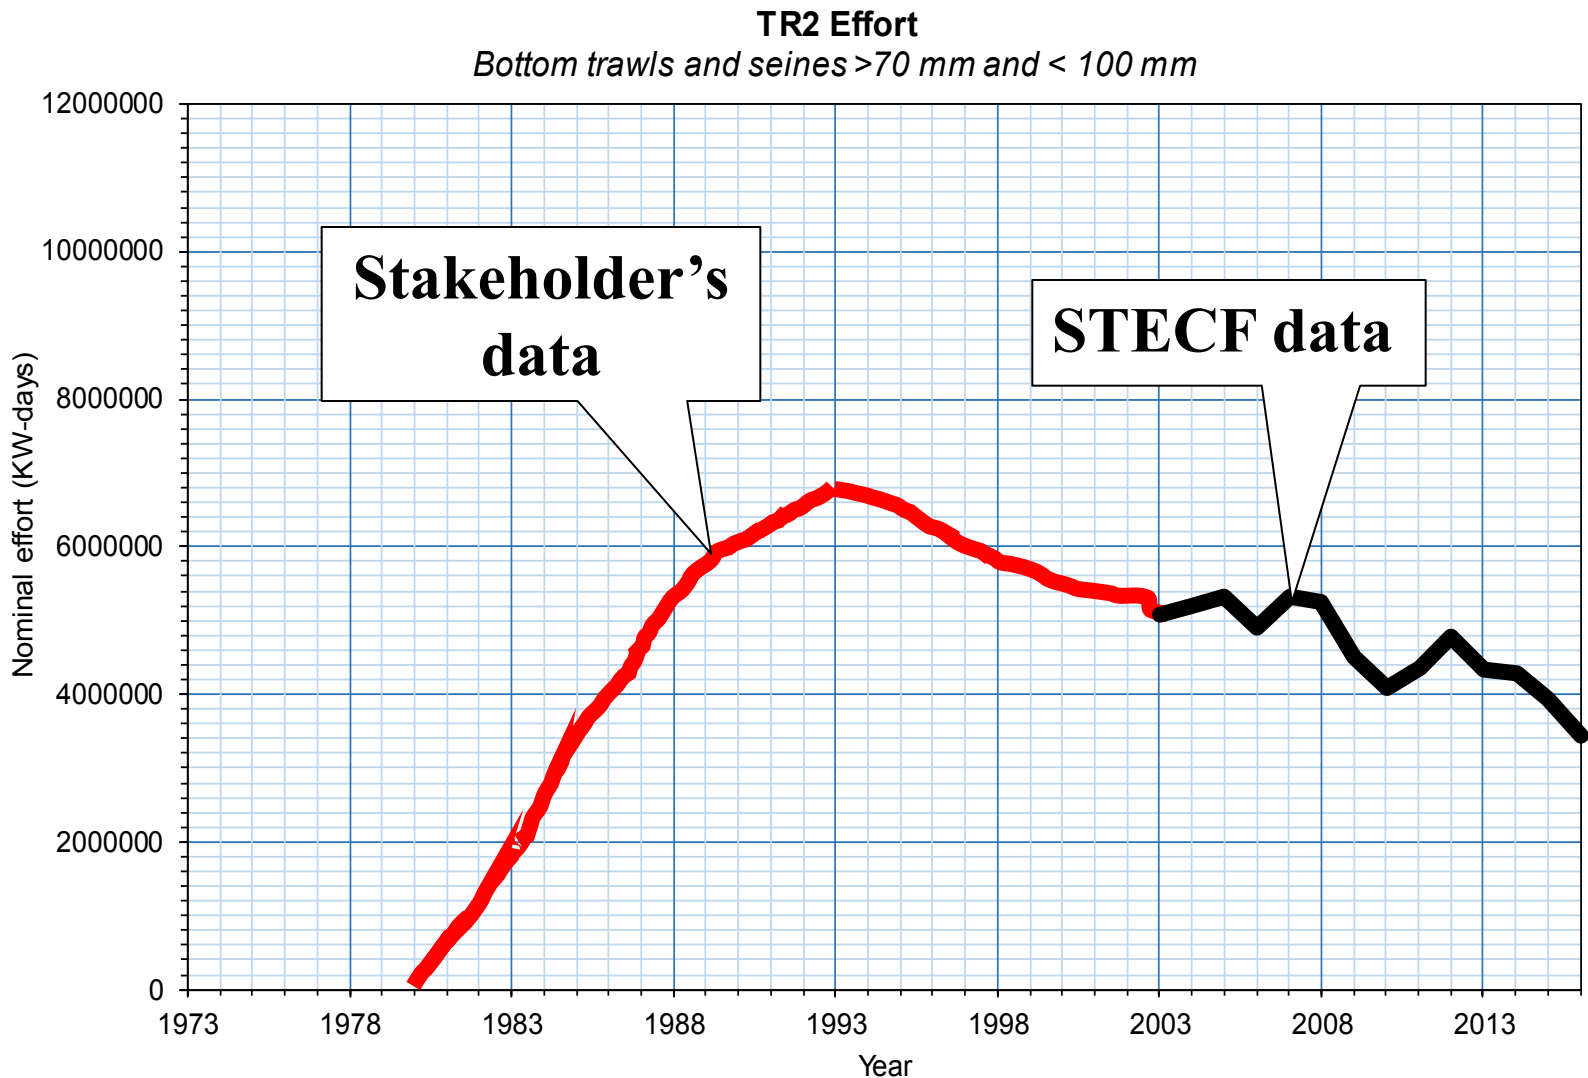

Reconstructing effort trajectories from stakeholders heads!

TR2 Effort

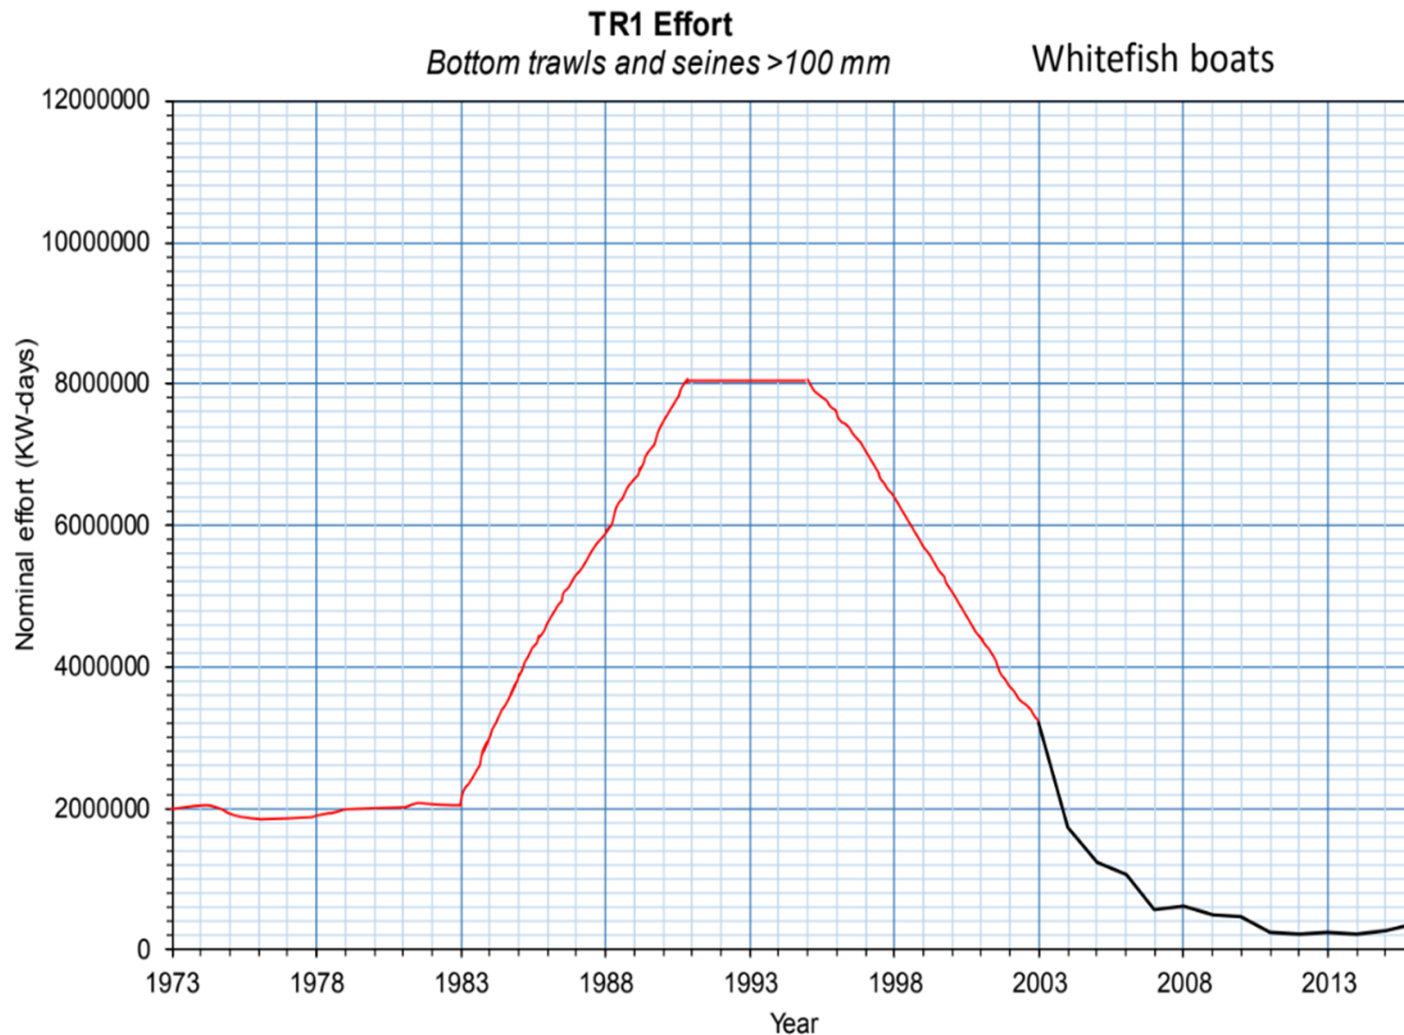

Bottom trawls and seines >70 mm and < 100 mm

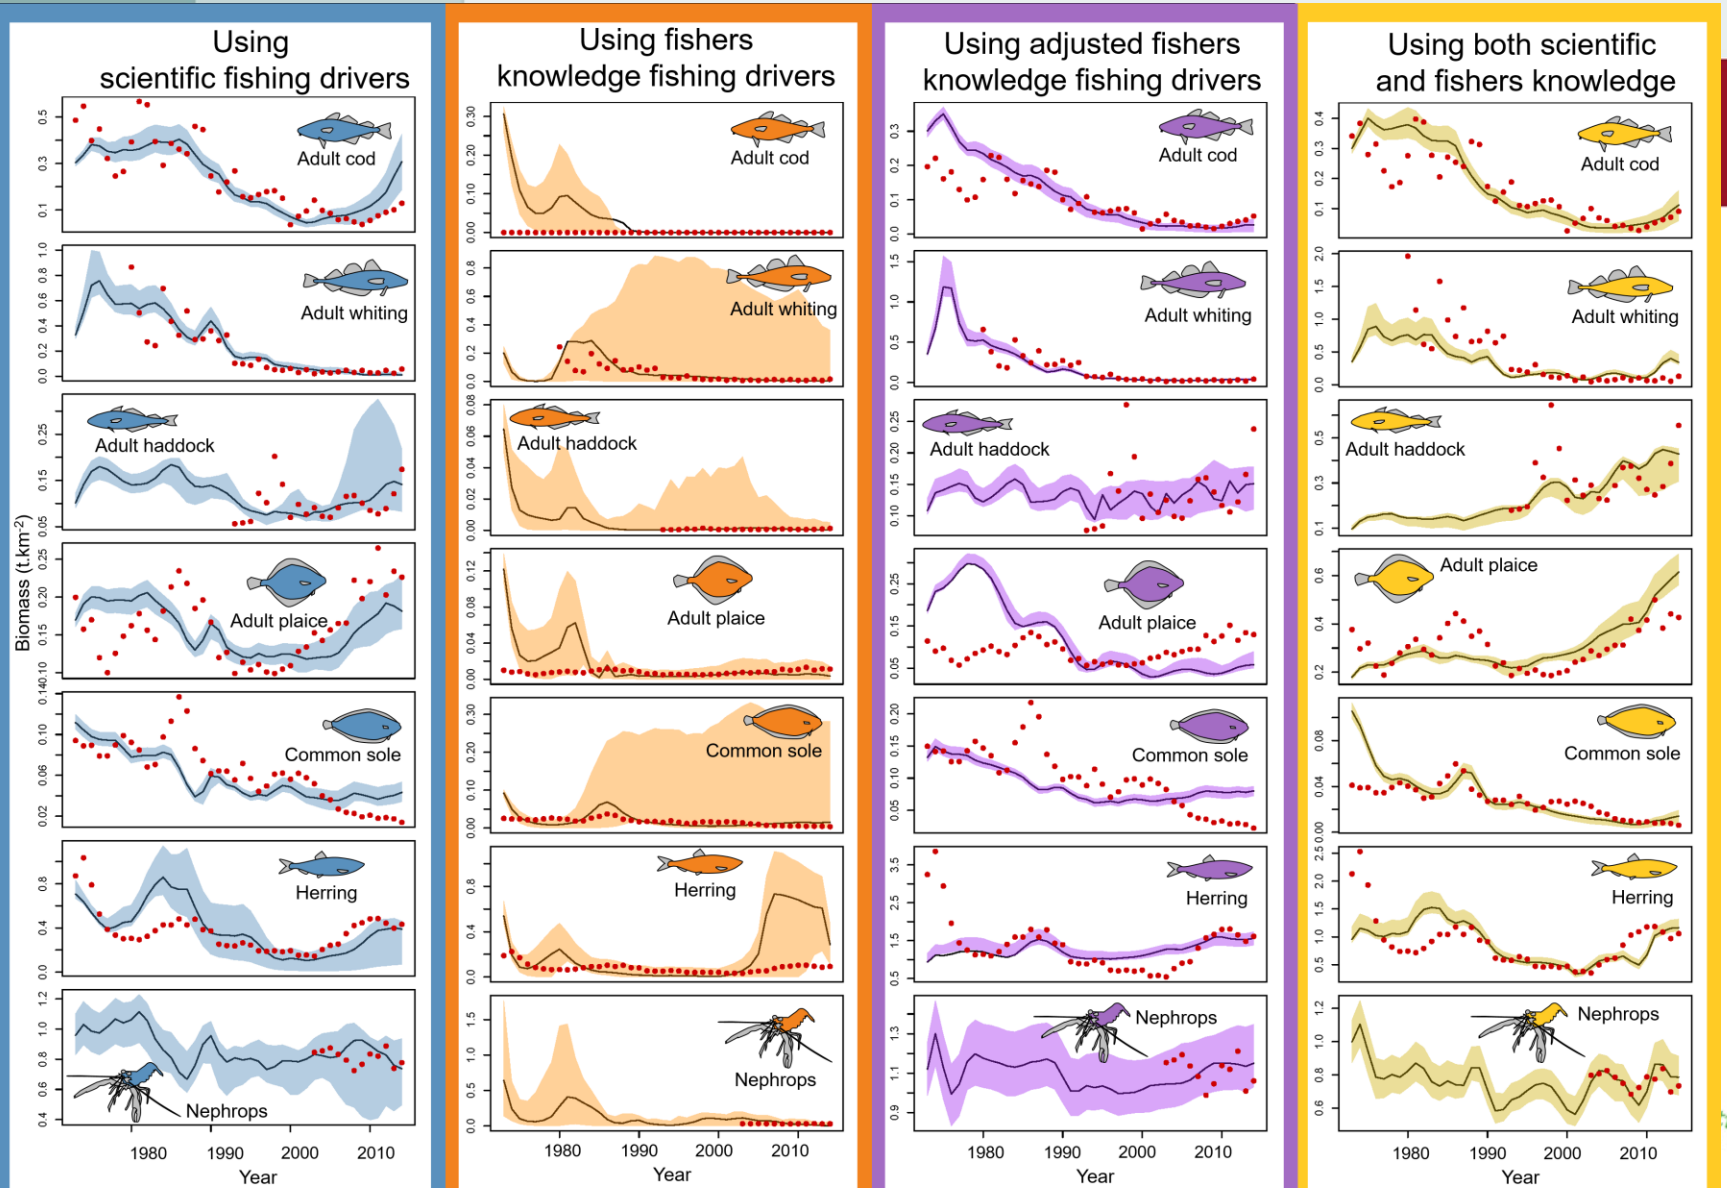

Reconstructing effort trajectories from stakeholders heads!

Reconstructing effort trajectories from stakeholders heads!

How does this work in the model?

WKIrish 5 Terms of Reference

- a) Review and report on the from the EwE and Le Mans modelling (WKIrish4), future scenarios.**
- b) Review stock mixing Irish Sea and adjacent waters (Celtic Sea and West of Scotland) and recommend a roadmap for future research.**
- c) Review and summarize individual stock trends based on the most recent assessments following on the WKIrish2 and WKIrish3 benchmarks.**
- d) Synthesise the ecosystem modelling and benchmark assessment outcomes, and make recommendations for future EBFM in the Irish Sea.**
