

Seabass (*Dicentrarchus labrax*) in divisions 6.a, 7.b, and 7.j (West of Scotland, West of Ireland, eastern part of southwest of Ireland)

ICES stock advice

ICES advises that when the precautionary approach is applied, commercial landings should be no more than 4 tonnes in each of the years 2018, 2019 and 2020. ICES cannot quantify total catches.

Stock development over time

Official reported landings are low and fluctuate without any trends (a maximum of 9 tonnes was landed in 2010). Most of the reported official landings are from Division 7.j.

Figure 1 Seabass in divisions 6.a, 7.b, and 7.j. Official landings.

Stock and exploitation status

Table 1 Seabass in divisions 6.a, 7.b, and 7.j. State of the stock and fishery relative to reference points.

		Fishing pressure				Stock size				
		2014	2015	2016		2014	2015	2016		
Maximum sustainable yield	F_{MSY}	?	?	?	Undefined	$MSY_{escapement}$?	?	?	Undefined
Precautionary approach	F_{pa}, F_{lim}	?	?	?	Undefined	B_{pa}, B_{lim}	?	?	?	Undefined
Management plan	F_{MGT}	—	—	—	Not applicable	S_{SBMGT}	—	—	—	Not applicable
Qualitative evaluation	-	?	?	?	Unknown	Qualitative evaluation	?	?	?	Unknown

† Version 2: Correction of ecoregion

Catch options

The ICES framework for category 6 stocks was applied (ICES, 2012a). For stocks without information on abundance or exploitation, ICES considers that a precautionary reduction of catches should be implemented. The precautionary buffer was last applied in 2013 (advice for 2014); therefore, it has to be applied this year again.

Table 2 Seabass in divisions 6.a, 7.b, and 7.j. The basis for the catch options.

Recent advised commercial landings		5 tonnes
Discard rate		Unknown
Precautionary buffer	Applied	0.8
Landings advice*		4 tonnes

*recent advised landings * precautionary buffer.

Basis of the advice

Table 3 Seabass in divisions 6.a, 7.b, and 7.j. The basis of the advice.

Advice basis	Precautionary approach
Management plan	ICES is not aware of any agreed precautionary management plan for seabass in this area.

Quality of the assessment

A series of official commercial landings data is available but the quality of this is unknown. Discarding of seabass on Irish observer trips since 1990 has been negligible. Data on seabass landings by shore anglers in Ireland were available and are estimated at 30 t in 2010 and 44 t in 2011 (this includes some landings from divisions 7.a and 7.g). Therefore an accurate time-series of total catches cannot be calculated.

Time-series of catches, releases, and size/age composition are needed from this component of the fishery in order to improve the assessment and advice. Stock identity remains poorly understood and tagging studies are ongoing. Seabass in divisions 6.a and 7.g around the southern and eastern coasts of Ireland is currently included in the seabass assessment in divisions 4.bc, 7.a, and 7d–h, but may be more associated with the stock in divisions 6.a, 7.b, and 7.j.

Issues relevant for the advice

A moratorium on landings of seabass in commercial fisheries has been in place in Ireland since 1990. The industry reports high sporadic catches which are discarded due to the moratorium. Recreational fisheries in Ireland are subject to bag limits of 2 fish/24 hrs, a 40 cm minimum size limit, and a closed season from 15th May to 15th June annually.

Reference points

No reference points are defined for this stock.
