

# ICES advice for 2012

cod-haddock-whiting-plaice-sole  
hake-anglerfish-megrims-*Nephrops*

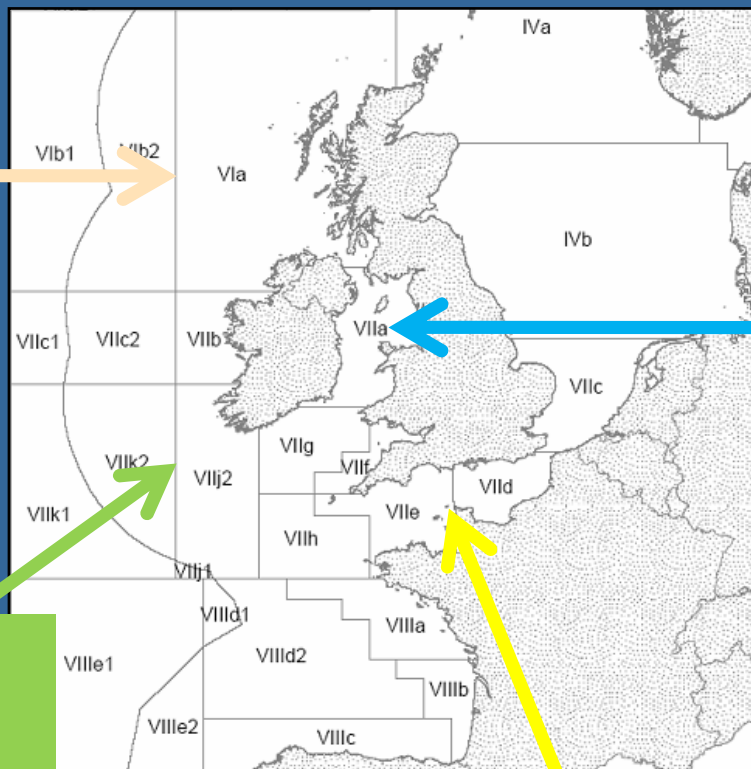

## North Western Waters RAC

5 July 2011 – Dublin

Manuela Azevedo  
ACOM Vice-chair

## West of Scotland & Rockall (VIab)

- Cod (VIa; VIb)
- Haddock (VIa; VIb)
- Whiting (VIa; VIb)
- Anglerfish (IIa,IIIa,IV,VI)
- Megrin (IVa-VIa; VIb)
- Saithe (IV, IIIa, VI)
- Nephrops (FUs11-12-13)

## Irish Sea (VIIa)

- Cod
- Haddock
- Whiting
- Plaice
- Sole
- Nephrops (FUs 14-15-19)

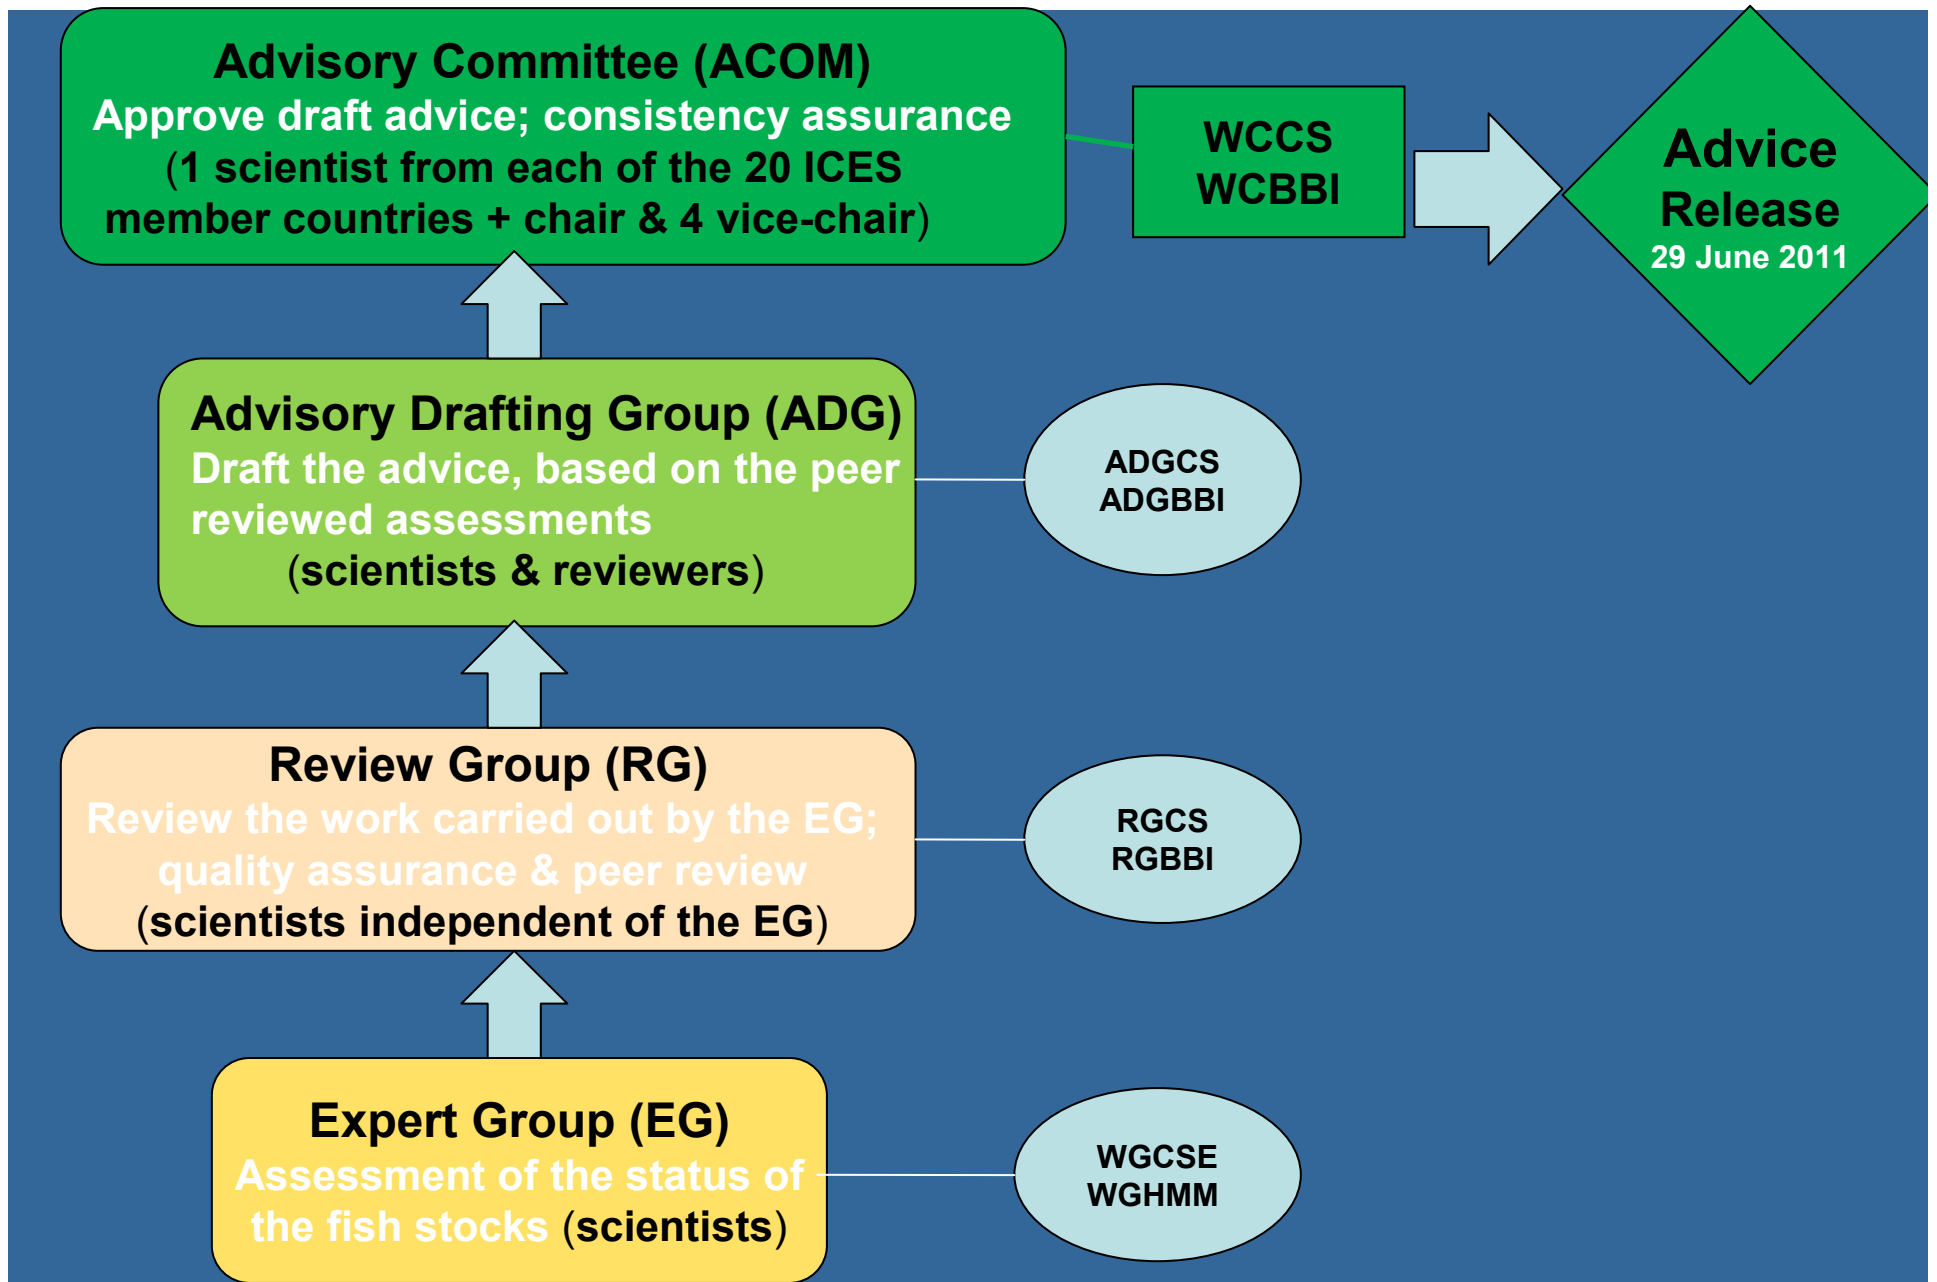

## Celtic Sea & West, Southwest Ireland

- Cod (VIIe-k)
- Haddock (VIIb-k)
- Whiting (VIIe-k)
- Plaice (CS; VIIh-k; VIIbc)
- Sole (CS; VIIh-k; VIIbc)
- Northern hake
- Anglerfish (VIIb-k, VIIIab)
- Megrin (VIIb-k, VIIIabd)
- Pollack (VI,VII)
- Nephrops FUs 16-17-20-22)

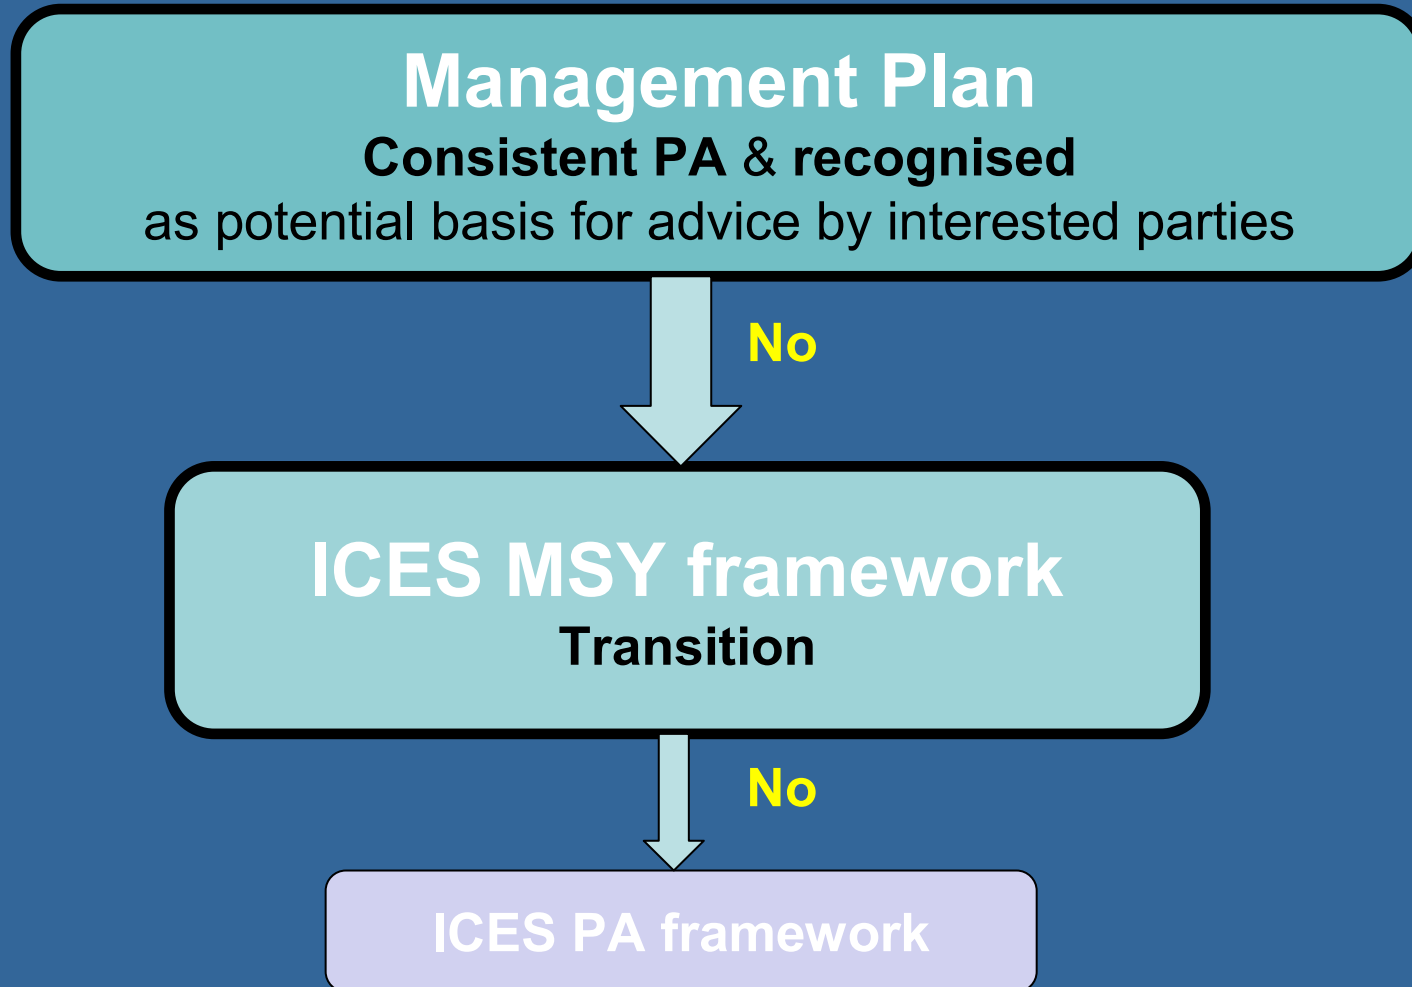

## English Channel

- Cod (IV, VIId, Skagerrak)
- Plaice (VIId)
- Plaice (VIIe)
- Sole (VIId)
- Sole (VIIe)

# Advisory Process

# Basis for ICES Advice for 2012

All options in Outlook Table for 2012

## Same principles, concept & framework:

- ✓ Maximize long term average yield
- ✓ Safeguard against low SSB
- ✓ Stepwise transition to ICES MSY Harvest Control Rule by 2015

## ICES MSY Transition

Moving from Current  $F_{2010}$  to  $F_{MSY}$  in 2015 in 5 steps

$F_{MSY-HCR \text{ transition } 2012} =$

“Minimum {  $0.6 F(2010) + 0.4 F_{MSY-HCR}(2012)$ ;  $F_{pa}$  }”

$F_{MSY-HCR \text{ transition } 2013} =$  “Min{  $0.4 F(2010) + 0.6 F_{MSY-HCR}(2013)$ ;  $F_{pa}$  }”

$F_{MSY-HCR \text{ transition } 2014} =$  “Min{  $0.2 F(2010) + 0.8 F_{MSY-HCR}(2014)$ ;  $F_{pa}$  }”

$F_{MSY-HCR \text{ transition } 2015} =$  “Min{  $0.0 F(2010) + 1.0 F_{MSY-HCR}(2015)$ ;  $F_{pa}$  }”

$F_{MSY-HCR}$

# ICES MSY Transition does not apply

when:

i)  $F_{2011}$  below  $F_{MSY}$  &  $SSB_{2012}$  above  $MSY B_{trigger}$   
 $F$  at  $F_{MSY}$

ii)  $SSB$  is small, further decline predicted (low  $R$ )

more rapid transition  
or  
 $F_{MSY-HCR}$  asap

# Stocks without population size estimates

	No Overfishing	Overfishing or Unknown Exploitation Status
<b>Decreasing</b> stock trend	<b>Reduce</b> catch	<b>Reduce</b> catch
<b>Stable</b> stock trend or <b>No trend information</b>	<b>Do not allow</b> catches to increase	<b>Do not allow</b> catches to increase
<b>Increasing</b> stock trend	<b>Do not allow</b> catches to increase	<b>Do not allow</b> catches to increase

Intended to move in the direction of MSY

- **Catches are already very low:** *No increase in catch until there is evidence that this will be sustainable*
- **New stocks:** *catches should not be allowed to increase*

## Overview by species/stocks

Stock	$F_{MSY}$	MSY $B_{trigger}$	Catch/Land 2012

**MP under development**

# Haddock in Division VIa (West of Scotland)

Discards 2010 – 51% (catch of 5 830 t)

Splitting discards by fleet shows that *Nephrops* vessels (TR2) are responsible for ~88% of all discards while landing only 21 tonnes, less than 1% of the total landings (2882 tonnes).

The short-term forecast is presented in terms of total removals. These are then divided into landings (55%), discards (36%), and unallocated removals (9%), using the most recent assessment to calculate the average proportions of these catch components over the last three years.

Basis:  $F_{2011} = F_{202} = F(2008-2010) = 0.29$  ;  $SSB(2012) = 31.3$ ;  $R(2012) = \text{TSA model estimate} = 105.1$  million,  $R(2013) = \text{GM} = 82.7$  million;  $\text{Removals}(2011) = 8.21$ .

MSY  $B_{trigger} = 9 \text{ th t}$   
 $F_{MSY} = 0.30$

**MP under development**

## Haddock in Division VIb (Rockall)

- Last years the **discards** are significantly reduced as a result of the small number of young haddock in the population: discard ratio ~ 47% (1991–2009) and 34% in the recent period (1999–2009); in 2010 ~8%
- Estimates of discards in the EU is a main uncertainty in the assessment and forecasts

Basis:  $F_{2011} = F_{32} = F(2008-2010) = 0.25$ ;  $SSB(2012) = 10\ 118$ ;  $R(2011, 2012) = 18\ 353$  thousands; Landings (2011) = 3466; Total catch (2011) = 4002.

**MP under development by the NWWRAC**

Discard rates have increased in some fleets in 2010, and this discard information is incomplete in the assessment

# Cod in Divisions VIIe–k (Celtic Sea cod)

Basis:  $F(2011) = F_{ss} = \text{mean}(F_{2008-2010})$  rescaled to  $F_{2010} = 0.51$ ;  $SSB(2012) = 21.2 \text{ kt}$ ;  $R(2011) = GM(1971-2008) = 3022$  (thousands); landings (2011) = 10.5 kt.

Rationale	Landings (2012)	Basis	F (2012)	SSB (2013)	%SSB change <sup>1)</sup>	% TAC change <sup>2)</sup>
MSY framework	10.0	$F_{MSY} (F_{ss} * 0.78)$	0.40	21.9	+3%	+149%
MSY transition	11.3	$(F_{2010} * 0.6 + F_{MSY} * 0.4)$	0.47	20.4	-4%	+180%
Precautionary Approach	14.7	$F_{ca} (F_{ss} * 1.33)$	0.68	16.1	-24%	+266%
Zero catch	0	$F=0$	0.00	34.6	+63%	-100%
<i>Status quo</i>	11.2	$F_{ss} * 0.9$	0.46	20.5	-3%	+177%
	12.1	$F_{ss}$	0.51	19.4	-9%	+200%
	12.9	$F_{ss} * 1.1$	0.56	18.3	-14%	+221%
	3.420	TAC-15% ( $F_{ss} * 0.24$ )	0.12	30.3	+43%	-15%
	4.023	TAC ( $F_{ss} * 0.27$ )	0.14	29.5	+39%	0%
	4.626	TAC+15% ( $F_{ss} * 0.31$ )	0.16	28.7	+36%	+15%

Weights in '000 tonnes.

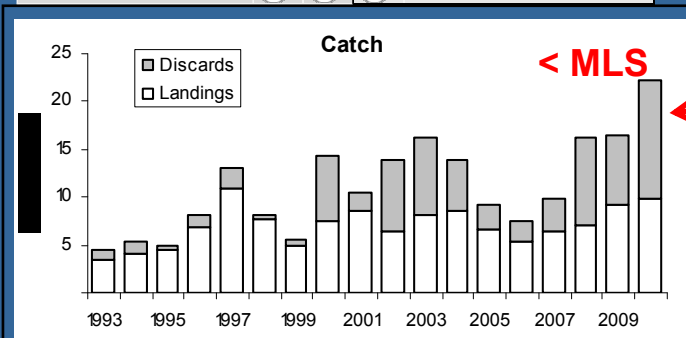

Because of the large 2009 year class is now entering the fishery, which was not anticipated in last year's advice or TAC, there will be a large inconsistency between the TAC set for 2011 (4023 t) and the predicted landings for that year, assuming the current fishing mortality (10 500 t). Therefore, in the absence of any effort limitation and/or TAC revision, **high discarding will occur**

# Haddock in Divisions VIIb-k

**Advice 2012:** No increase in catch and technical measures to mitigate the increased discarding of recruiting YC

Precautionary approach ( $B_{pa}$ , $B_{lim}$ )	?	Unknown
Qualitative evaluation	✗	Below poss. reference points

**Haddock:** reduce;  
tech measures

Discarding is a serious problem for this stock. The discard rates for all fleets in 2010 were **92-100%** for one-year-olds; **22–96%** for two-year-olds and **3–68%** for three-year-olds by number

Measures:

In order to minimise discards, a **square mesh panel** of at least 120 mm should be introduced for all fleets or selectivity devices that achieve equivalent or better improvements

**Whiting:** reduce;  
tech measures

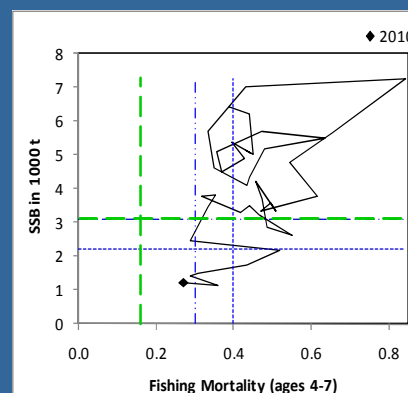

Measures:

- **spatial and temporal** changes in fishing practises;
- **technical measures** such as increased codend mesh size, square mesh panels, separator trawls, and increased top sheet mesh in towed gears

# Sole in Division VIIa (Irish Sea)

**MSY:** Landings should be no more than 200 t
